SUMMARY

Senior full-stack engineer (10+ years) who ships production web platforms end-to-end — React / Next.js / TypeScript on the front, Node.js and Python on the back. I take on the hard parts: complex SaaS architecture, payments, production AI/LLM features, and custom canvas/WebGL — proven across real-time data-visualization for oil & gas majors, multi-PSP iGaming payments, and AI-driven products.

CORE SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React (16–19), Next.js, SvelteKit, Redux / Zustand, TanStack Query, MUI, Tailwind, Storybook

Data-Viz & Graphics: Highcharts, Plotly, Recharts, D3, Three.js, WebGL, HTML5 Canvas, tldraw

Backend: Node.js (NestJS, Express, Fastify), Python (Django / DRF, Flask), REST & GraphQL

AI / LLM: LangGraph, LangChain, OpenAI, Anthropic, Gemini, multi-provider pipelines, RAG

Payments: Stripe (Connect, webhooks, subscriptions), multi-PSP orchestration, 3DS / OTP, hosted payment pages

Data, Infra & Testing: PostgreSQL, MongoDB, Redis, Supabase, AWS, Cloudflare Workers, Docker, GitHub Actions, Terraform · Vitest, Playwright, Cypress

EXPERIENCE

Senior Full-Stack Engineer — Independent (Contract & Product)

Remote · Mar 2025 – Present

- Built core pieces of a white-label, multi-tenant **payments-orchestration platform** for an iGaming PSP aggregator (GR8Tech / Parimatch): Merchant → MID → PSP routing across **100+ payment providers**, ~80 hosted payment-method UIs, 14 white-label brands. Shipped a SolidJS + Konva visual routing-tree editor (internal npm package) and a Preact hosted payment page with 3DS/OTP challenge flows and live socket status.
- Designed and deployed a production **LangGraph / LangChain multi-agent service** (qualifier / finder / outreach agents, runtime tool-gateway, cost-aware result handling, webhook automation) for a B2B sales-intelligence platform.
- Built an **AI e-commerce platform** end-to-end (Next.js 16, React 19, Supabase, Stripe, Gemini): race-free two-phase Stripe checkout with 1-click upsells, idempotent webhooks, a multi-provider AI image pipeline with fallback + key rotation, and print-on-demand fulfillment.
- Senior contract delivery (Upwork — **100% Job Success, Top Rated**): led design-system standardization as SaaS architect for a GoHighLevel insurance platform; shipped custom tldraw canvas apps.

Frontend Developer — Corva AI

Remote · Oct 2021 – Mar 2025

- Built high-performance **data-visualization apps** (React + Highcharts) for a drilling-analytics SaaS used by majors including **ExxonMobil, Baker Hughes, Halliburton, and Nabors** — complex datasets (scatter plots with 10k+ points) rendered with smooth interactivity.
- Engineered processing/rendering for **large datasets (40–50k+ items)**: smart multi-source merging, expensive-re-render optimization, and caching.
- Developed the internal platform for configuring/maintaining client setups (test-covered validation logic, modular architecture); consistently owned the hardest tasks across two teams in a ~80-engineer frontend org.

React & Node Developer — Code & Care

Remote · May 2019 – Sep 2021

- Delivered React / TypeScript / Node projects for international clients (multiple long-term engagements); introduced a **UI testing strategy from scratch** and set up Git hooks and CI.
- Built canvas / WebGL features: drawing, animation, and in-browser recording.

SELECTED PROJECTS

Zorro · [getzorro.ai](#) — Production B2B sales-intelligence platform; LangGraph multi-agent core (Django + Flask + LangChain), semantic search, credit ledger.

Frame & Tail · [frameandtail.com](#) — AI pet-portrait e-commerce (Next.js 16, Supabase, Stripe, Gemini) with multi-provider image generation and print-on-demand fulfillment.

BlockHorizon · [charts.blockhorizon.io](#) — Bitcoin on-chain analytics SaaS; ~125 interactive charts (Highcharts / Plotly / uPlot / Recharts), custom backtest engine, Stripe billing.

Telestration — Sports-video telestration tool with a 2,000-LOC **WebGL drawing engine** (GLSL chroma-key, four-canvas compositing, capture-to-video with voice-over).

EDUCATION

Specialist Degree, Mechanical Engineering — NTUU “Igor Sikorsky Kyiv Polytechnic Institute”

2011 – 2018

Additional: algorithms & data structures (AlgoExpert). Code samples and references available on request.
